## Investing in The New York City Watershed, New York State

---

### Benefits

This project is part of a much larger effort to provide improved drinking water for 9 million people in New York City. It assists farmers in building better management systems, and supports sustainable agriculture.

### Economic Opportunities

The project will create or save jobs in the construction industry and increase farm productivity. The expanded demand for construction supplies and agricultural equipment will provide a local economic boost to assist in community development. The long-term environmental improvements will enhance farm sustainability and profitability.

### Statewide Perspective

The use of proven conservation practices will result in improving the overall water quality in the State of New York. The New York City water supply system is one of the largest surface water storage and supply systems in the world. These practices benefit the entire resource conservation effort in New York.
